### pandas.plotting subpackage

Pandas provides some extra plotting functions for a few select plot types.

#### **About the Data**

In this notebook, we will be working with Facebook's stock price throughout 2018.

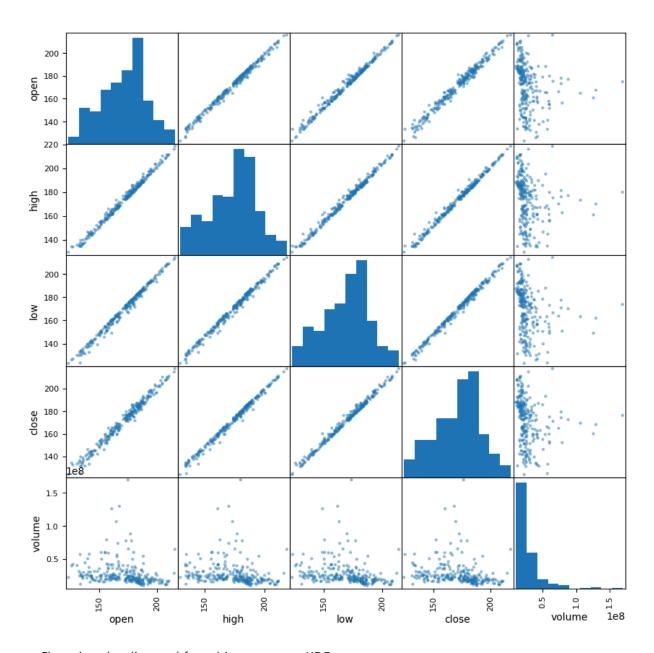

### Setup

```
In [2]: %matplotlib inline
import matplotlib.pyplot as plt
import numpy as np
import pandas as pd

fb = pd.read_csv('fb_stock_prices_2018.csv', index_col='date', parse_dates=True)
```

#### **Scatter matrix**

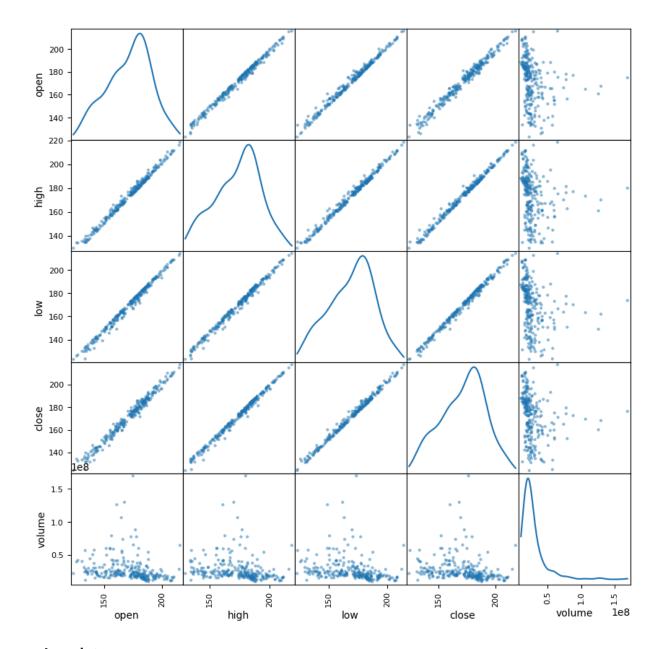

```
In [3]: from pandas.plotting import scatter_matrix
        scatter_matrix(fb, figsize=(10, 10))
Out[3]: array([[<Axes: xlabel='open', ylabel='open'>,
                 <Axes: xlabel='high', ylabel='open'>,
                 <Axes: xlabel='low', ylabel='open'>,
                 <Axes: xlabel='close', ylabel='open'>,
                 <Axes: xlabel='volume', ylabel='open'>],
                [<Axes: xlabel='open', ylabel='high'>,
                 <Axes: xlabel='high', ylabel='high'>,
                 <Axes: xlabel='low', ylabel='high'>,
                 <Axes: xlabel='close', ylabel='high'>,
                 <Axes: xlabel='volume', ylabel='high'>],
                [<Axes: xlabel='open', ylabel='low'>,
                 <Axes: xlabel='high', ylabel='low'>,
                 <Axes: xlabel='low', ylabel='low'>,
                 <Axes: xlabel='close', ylabel='low'>,
                 <Axes: xlabel='volume', ylabel='low'>],
                [<Axes: xlabel='open', ylabel='close'>,
                 <Axes: xlabel='high', ylabel='close'>,
                 <Axes: xlabel='low', ylabel='close'>,
                 <Axes: xlabel='close', ylabel='close'>,
                 <Axes: xlabel='volume', ylabel='close'>],
                [<Axes: xlabel='open', ylabel='volume'>,
                 <Axes: xlabel='high', ylabel='volume'>,
                 <Axes: xlabel='low', ylabel='volume'>,
                 <Axes: xlabel='close', ylabel='volume'>,
                 <Axes: xlabel='volume', ylabel='volume'>]], dtype=object)
```

Changing the diagonal from histograms to KDE:

```
In [4]: scatter_matrix(fb, figsize=(10, 10), diagonal='kde')
```

```
Out[4]: array([[<Axes: xlabel='open', ylabel='open'>,
                 <Axes: xlabel='high', ylabel='open'>,
                 <Axes: xlabel='low', ylabel='open'>,
                 <Axes: xlabel='close', ylabel='open'>,
                 <Axes: xlabel='volume', ylabel='open'>],
                [<Axes: xlabel='open', ylabel='high'>,
                 <Axes: xlabel='high', ylabel='high'>,
                 <Axes: xlabel='low', ylabel='high'>,
                 <Axes: xlabel='close', ylabel='high'>,
                 <Axes: xlabel='volume', ylabel='high'>],
                [<Axes: xlabel='open', ylabel='low'>,
                 <Axes: xlabel='high', ylabel='low'>,
                 <Axes: xlabel='low', ylabel='low'>,
                 <Axes: xlabel='close', ylabel='low'>,
                 <Axes: xlabel='volume', ylabel='low'>],
                [<Axes: xlabel='open', ylabel='close'>,
                 <Axes: xlabel='high', ylabel='close'>,
                 <Axes: xlabel='low', ylabel='close'>,
                 <Axes: xlabel='close', ylabel='close'>,
                 <Axes: xlabel='volume', ylabel='close'>],
                [<Axes: xlabel='open', ylabel='volume'>,
                 <Axes: xlabel='high', ylabel='volume'>,
                 <Axes: xlabel='low', ylabel='volume'>,
                 <Axes: xlabel='close', ylabel='volume'>,
                 <Axes: xlabel='volume', ylabel='volume'>]], dtype=object)
```

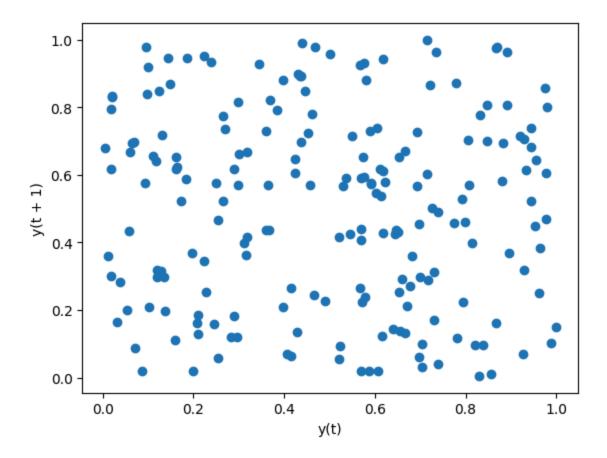

# Lag plot

Lag plots let us see how the variable correlations with past observations of itself. Random data has no pattern:

```
In [5]: from pandas.plotting import lag_plot
    np.random.seed(0) # make this repeatable
    lag_plot(pd.Series(np.random.random(size=200)))
```

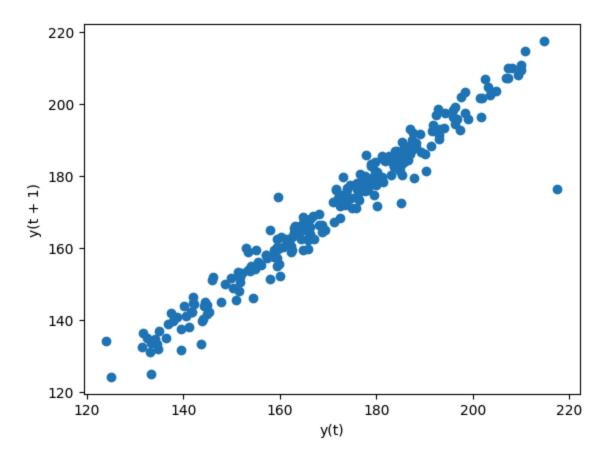

Out[5]: <Axes: xlabel='y(t)', ylabel='y(t + 1)'>

Data with some level of correlation to itself (autocorrelation) may have patterns. Stock prices are highly auto-correlated:

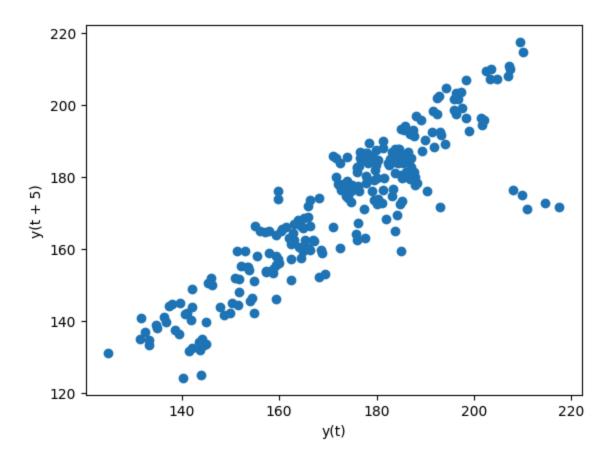

```
In [6]: lag_plot(fb.close)
```

Out[6]: <Axes: xlabel='y(t)', ylabel='y(t + 1)'>

The default lag is 1, but we can alter this with the lag parameter. Let's look at a 5 day lag (a week of trading activity):

```
In [7]: lag_plot(fb.close, lag=5)
Out[7]: <Axes: xlabel='y(t)', ylabel='y(t + 5)'>
```

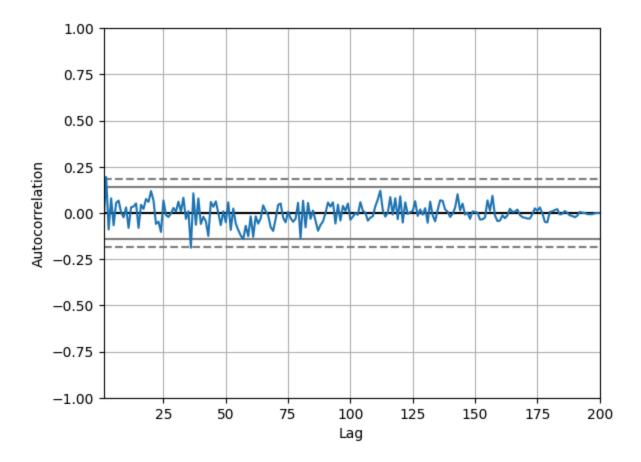

## **Autocorrelation plots**

We can use the autocorrelation plot to see if this relationship may be meaningful or just noise. Random data will not have any significant autocorrelation (it stays within the bounds below):

```
In [8]: from pandas.plotting import autocorrelation_plot
    np.random.seed(0) # make this repeatable
    autocorrelation_plot(pd.Series(np.random.random(size=200)))
```

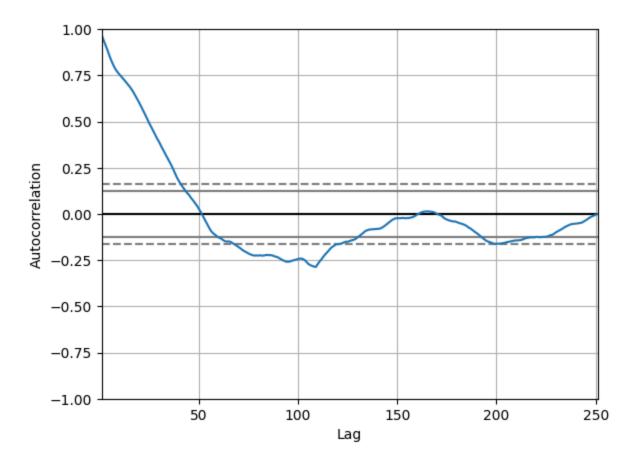

Out[8]: <Axes: xlabel='Lag', ylabel='Autocorrelation'>

Stock data, on the other hand, does have significant autocorrelation:

```
In [9]: autocorrelation_plot(fb.close)
```

Out[9]: <Axes: xlabel='Lag', ylabel='Autocorrelation'>

## **Bootstrap plot**

This plot helps us understand the uncertainty in our summary statistics:
